Smart Search on PDFs

CLX Experience
Loading takes 1–2 seconds when pasting an image.
Lacks a clear or available text wrap option.
Requires clicking directly on a small down-arrow to reveal menu options.
Offers a limited color selection with few bright or vibrant choices.
Selecting all or using Ctrl + A inside a table fails to properly capture all table data, preventing mass copy, paste, or deletion.
Clusterix AI is limited to organizational tasks only (sorting files, tagging). No writing assistant embedded in Documents or Cells editor.
No formula bot or data insight assistant in the Cells (spreadsheet) application.
Workflow automation exists but has a narrower ecosystem of external app integrations.
folder sorting only scanned PDFs are not made fully searchable by keyword content automatically.

Microsoft Office / Google Docs Experience
Pastes instantly (in a fraction of a second) without any loading delays.
Formatting is straightforward with intuitive text wrapping tools.
Clicking anywhere on the icon opens the dropdown options.
Features a wider range of customizable, bright, and modern color options.
Pressing Ctrl + A while inside a table smoothly highlights all text/cells within the table (or whole table structure) for instant copy, paste, or deletion.
Google Docs (Gemini) and MS Office (Copilot) have AI deeply integrated for drafting, summarizing, rewriting, and formula generation inline.
Excel Copilot and Gemini in Sheets let users ask plain-English questions like "show me sales trends by month" and auto-generate charts or formulas.
Google / Microsoft offer Zapier, Make, Power Automate, and hundreds of native connectors for deep automation across thousands of apps.
Google Drive / OneDrive index scanned documents and make them fully searchable by text content without manual intervention.
